

# Project 1: passwordTester

It is an app that determines the strength of your password.

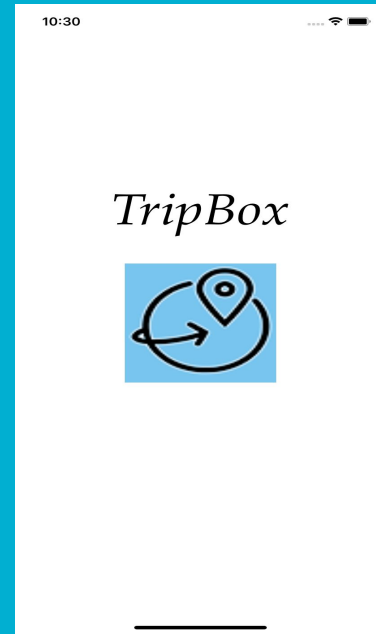

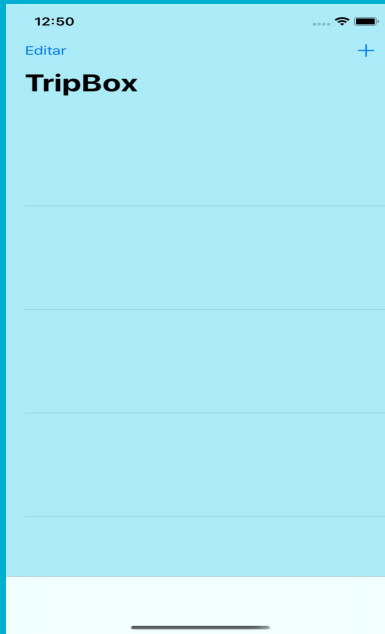

1. Localized into French
2. The background color changes based on your password strength
3. Autolayout for all kinds of iphones

The app detects the strength by measuring the combination of uppercase letters, lowercase letters, and numbers. If your password contains only one of the three categories, it will be a weak password, therefore the red background color.

# Project 2: TripBox

## The only app you need for recording your trip

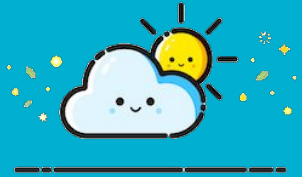

1. Localized into Spanish
2. Using CoreData Model
3. Using blue as the main theme color

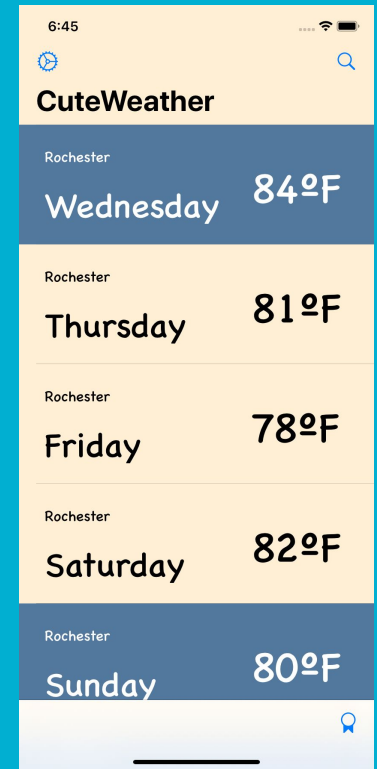

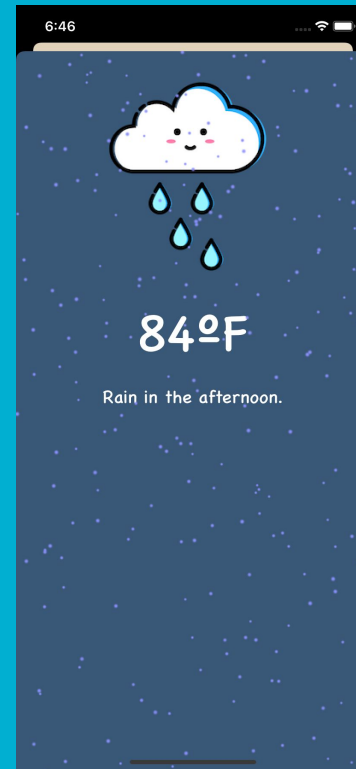

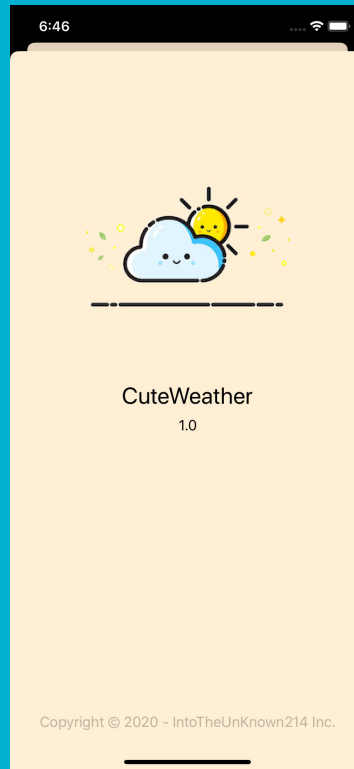

Want to record where you've been in the past? TripBox is the only app you need! You have the liberty to put down your departure city, destination city, the duration of the trip, and of course the way you travel! With a simple edit button, you can also easily delete any pass trip.

# Project3: CuteWeather

Give you the  
most-updated weather  
info

1. Localized into French and Spanish
2. Cute animation
3. Setting for metrics/imperial system

CuteWeather is THE ONLY app you need to get your weather information. The app emits the theme of cuteness. You can change the settings in your app. For example, if you are used to celcius instead of fahrenheit, then you can go to the setting and change it up! We've also added animation for rainy days to give you the immersive experience. You can also delete any weather by simply swipe left on the certain day.

# Hackathon: Get swifty

## A fun 2D shooting game of Rick and Morty theme

1. Joystick control
2. Audio in the background
3. Reward and punishment system

Bored of quarantine and up for a quick and challenging shooting game? Then come try out our Rick and Morty game!

You start off with three HP. Shoot the monsters and dodge the falling obstacles along the way! Also, don't forget the collect the coins.

X for shooting, and Y is for jumping
